Android Phones

The new Android phones are phones that operate on the Linux Kernal mobile operating System. It was developed by Android Inc, and later purchased by Google. This system enables developers to write managed codes in the java language and control the device with Google developed Java libraries.

The Android Phones are the phones of the future because they combine the ultimate advances in mobile phones, video, cameras, PC's and Navigation systems with multiple applications. The Phase development of the Android Phones started with the first model that had bugs and poor documentation, this was first introduced with the Sake Game-Android Development Phone. Next came the Android SDK it had a debugger, libraries, documentation, and tutorials. The final droid was the Android OS-Donut which added supports like voice search, priced applications and Gmail freeze fixes.

The Android OS system is important in this new system because it allows third party developers to create their own screen widgets. This allows for more applications and more opportunities for the manufacturer. The new Android Phones are being made by Google, Motorola, and HTC, LG, Dell and others breaking into the Smartphone market. The technology that it promises is ground breaking. The Android system acts like a robot, the user tells it what to do and it does it with supposed lightening speed.

The new Android Phones are basically bringing the desktop to the mobile phones. It allows for emailing, instant messaging, and web browsing all at the same time. It can run applications in the background while the user goes to a social network site. It also allows the user to listen to music and write an email at the same time, while talking on the phone. The possibilities are endless; the Android system allows several applications to run at the same time, just as a computer with windows does.

There are thousand of applications available for the Android phones and more are becoming available everyday. With the apps and the ability to multitask without having to shut down one act to do another is the new age of the mobile phones thanks to Goggles Android system. The new Android 2.0 is the latest in the line of Android systems to hit the market. The capabilities and promises are coming true very quickly as 2.0.1 stands ready for release.

Many people enjoy using the Android Phones already and sales have been phenomenal. Everyone wants a system that acts like a PC but is really a phone with all of the capabilities. The technology has just begun and there is more to come.
