The Sniffer Enterprise Management Architecture provides unsurpassed network visibility.

Managing today's complex and widespread enterprise network has never been more challenging. As an IT professional, how can you ensure that your network and the applications it supports delivers the availability, security, and reliability that your business requires to succeed in this highly competitive world—24x7?

Sniffer® Distributed™ helps you meet these formidable challenges by providing a fault and network performance management solution that you can deploy across your entire enterprise. It delivers unparalleled network monitoring, protocol decodes, and Expert analysis capabilities to all key segments, e.g., Local Area Network (LAN), Wide Area Network (WAN), Asynchronous Transfer Mode (ATM), and Gigabit Ethernet throughout the network.

This powerful combination of standards-based monitoring and Expert analysis makes Sniffer Distributed the ideal tool to proactively manage today's multitopology, multiprotocol distributed networks. With Sniffer Distributed you can monitor, validate, and evaluate your entire network infrastructure operations—from troubleshooting and baselining—to real-time and historical analysis. Armed with these insights, you can identify and correct network performance problems and bottlenecks—before they impact your users.

Sniffer Distributed also gives you centralized, secure, and easy access. With its Windows® or browser-based UI (Sniffer WebConsole currently for Gigabit and Ethernet only), you can access Sniffer Distributed Appliances anytime—from anywhere.

World-Class Training, Consulting, and Support

Sniffer® University™ is a comprehensive educational resource for building and enhancing all network professionals' skills in fault and performance management. Sniffer University has trained over 70,000 network professionals worldwide. The Sniffer Certified Professional Program provides network professionals industry-recognized accreditation as experts in their field.

Sniffer Professional Services can assist you during all network growth stages—from planning, design, and implementation, through ongoing management. Our consultants provide expert resources and an independent perspective to meet your specific needs.

Network Associates® PrimeSupport® Services offers essential product knowledge and rapid, reliable technical solutions. Over 80% of our technical staff holds industry certifications and/or technical degrees and over five years of experience in the IT industry. You can engage this high level of expertise through our extensive support portfolio, which consists of PrimeSupport KnowledgeCenter Service Portal, Connect, Priority, and Enterprise. PrimeSupport is your key to maximizing processing uptime, revenue generation, and customer satisfaction.

Better performance for your network, and your bottom line. Sniffer® Technologies realizes that your network has become central to your business. A network slow-down or outage can easily translate into hundreds of thousands of dollars in lost revenue and productivity. To ensure around-the-clock availability for customers and partners, you need proven solutions that detect and resolve bottlenecks before they become problems.

Sniffer maintains peak performance across all LAN and WAN topologies, from 10/100 Ethernet to the latest Wireless LAN and VoIP Network Protocols—across the enterprise and the Internet. Built to analyze the entire network, Sniffer software proactively monitors and troubleshoots all network layers from the physical to the applications layer—all in real-time.
